**onTAB** is the perfect complement for schools that are making Android tablets their technology of choice to help transform education.

We have developed an **"all in one"** solution to help all the parts involved in a digital project to be successful: Head Teachers, ICT administrators, parents and students.

Our software facilitates the task of the ICT administrator, reinforcing and complementing the control and security functions that any educational project requires, all in **real time.** In addition it improves the Wi-fi connection´s stability, thanks to the innovative function OnWiFi. **onTAB** is an essential element for our solution **Learning Everywhere**.

MDM & App Management

The ICT administrator can establish permissions and settings for the camera, Wi-Fi, Bluetooth, brightness level, volume, etc.
Some applications can be made available and enabled for the lessons through the apps' white list, while the others are disabled.

Classroom Management

Easy to use as well as effective. The software has been designed with the objective of avoiding distractions in the classroom, for the benefit of both students and teachers. The teacher, at any moment, can pause all the screens, block access to the Internet, as well as deactivate the Internet filter on all the students´ tablets in **real time**, regardless of what network they are connected to, **which is a real innovation and solves the current connectivity issues.**

Internet Filter

Students can always surf the web in a safe environment with their tablets, either at school or at home. Teachers can deactivate this at any time within the classroom with a single click. The software incorporates the renowned Escudo Web® Internet filter, used by several local governments.

Geolocation

This allows you to locate a lost or stolen tablet. The function is available for ICT administrators only during school hours. It can also be used by parents from the Parental Interaction app, only when the tablet is not under the school´s control.

Digital Wellbeing

This is a system that allows the ICT administrator or the parents to establish recommended breaks, such as during lunch time or at night. This functionality helps to prevent sleeping disorders and screen addiction.

Analysis and Monitoring

This function allows you to collect information related to Internet browsing and videos viewed by the students. It presents very useful information, which will help with the decision-making process of the Internet filter´s configuration.

NEW: DIGITAL PARENTAL INTERACTION

The **digital parental interaction** has been designed to favour the involvement of parents with the task of supervision, in addition to creating a new model for the digital coexistence at home, in keeping with the 21st century and digital natives. It facilitates the parents´ involvement with the surveillance and safety of their children.

It is important to highlight that this function, configurable by the parents on their own phone, can be activated by the educational centre, only if it decides to allow them to do so.

The Parental Interaction app includes the innovative function **Please listen!** which allows parents to **instantly** pause their child's tablet for a limited time in order to perform a specific task, such as meal time, shower time, time to brush their teeth or have a chat.

onTAB software is integrated during the tablet´s manufacturing process.

It is an innovative and decisive product, which adapts to all the organisational models that coexist in the schools, applying different usage policies at each educational level. It allows to evolve according to the degree of maturity of the students, for example, some students after class could surf the web freely while others are protected by the Internet filter.

Without a doubt, the perfect complement to education based on tablets Android.
